TOTAL				19	04	02	21	350	350	700	22

Note: BSC-Basic Science Courses, PCC: Professional core. IPCC-Integrated Professional Core Courses, MCC- Mandatory Credit Course, AUD/AEC –Audit Course / Ability Enhancement Course(A pass in AUD/AEC is mandatory for the award of the degree), PCCL-Professional Core Course lab, L-Lecture, P-Practical, T/SDA-Tutorial / Skill Development Activities(Hours are for Interaction between faculty and students)

Integrated Professional Core Course (IPCC): Integrated Professional Core Course (IPCC): Refers to Professional Theory Core Course Integrated with practical of the same course. The theory part of the IPCC shall be evaluated both by CIE and SEE. The practical part shall be evaluated by only CIE (no SEE). However, questions from the practical part of IPCC shall be included in the SEE question paper.

Audit Courses /Ability Enhancement Courses Suggested by BOS (ONLINE courses): Audit Courses: These are prerequisite courses suggested by the concerned Board of Studies. Ability Enhancement Courses will be suggested by the BoS if prerequisite courses are not required for the programs. **Ability Enhancement Courses:**

- These courses are prescribed to help students to enhance their skills in in fields connected to the field of specialisation as well allied fields that leads to employable skills. Involving in learning such courses are impetus to lifelong learning.
- The courses under this category are online courses published in advance and approved by the concerned Board of Studies.
- Registration to Audit /Ability Enhancement Course shall be done in consultation with the mentor and is compulsory during the concerned semester.
- In case a candidate fails to appear for the proctored examination or fails to pass the selected online course, he/she can register and appear for the same course if offered during the next session or register for a new course offered during that session, in consultation with the mentor.
- The Audit Ability Enhancement Course carries no credit and is not counted for vertical progression. However, a pass in such a course is mandatory for the award of the degree.

Skill development activities: Under Skill development activities in a concerning course, the students should

1. Interact with industry (small, medium, and large).
2. Involve in research/testing/projects to understand their problems and help creative and innovative methods to solve the

- problem.
- 3. Involve in case studies and field visits/ fieldwork.
- 4. Accustom to the use of standards/codes etc., to narrow the gap between academia and industry.
- 5. Handle advanced instruments to enhance technical talent.
- 6. Gain confidence in modelling of systems and algorithms for transient and steady-state operations, thermal study, etc.
- 7. Work on different software/s (tools) to simulate, analyze and authenticate the output to interpret and conclude.

All activities should enhance student's abilities to employment and/or self-employment opportunities, management skills, Statistical analysis, fiscal expertise, etc.

Students and the course instructor/s to involve either individually or in groups to interact together to enhance the learning and application skills of the study they have undertaken. The students with the help of the course teacher can take up relevant technical –activities which will enhance their skill. The prepared report shall be evaluated for CIE marks.

Internship: All the students have to undergo mandatory internship of 6 weeks during the vacation of I and II semesters and /or II and III semesters. A University examination shall be conducted during III semester and the prescribed internship credit shall be counted for the same semester. Internship shall be considered as a head of passing and shall be considered for the award of degree. Those, who do not take-up/complete the internship shall be declared as fail in internship course and have to complete the same during the subsequent University examination after satisfying the internship requirements.

- Note:** (i) Four credit courses are designed for 50 hours Teaching – Learning process.
 (ii) Three credit courses are designed for 40 hours Teaching – Learning process.
 (iii) Two credit courses are designed for 25 hours Teaching – Learning process.

PCC - Assessment Details (both CIE and SEE)

- The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 50% of the maximum marks. Minimum passing marks in SEE is 40% of the maximum marks of SEE. A student shall be deemed to have satisfied the academic requirements and earned the credits allotted to each subject/ course if the student secures not less than 50% (50 marks out of 100) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together.
- Continuous Internal Evaluation:
- Three Unit Tests each of 20 Marks
- Two assignments each of 20 Marks or one Skill Development Activity of 40 marks
- to attain the COs and POs
- The sum of three tests, two assignments/skill Development Activities, will be scaled down to 50 marks
- CIE methods /question paper is designed to attain the different levels of Bloom's taxonomy as per the outcome defined for the course.

PCC - Semester End Examination:

- The SEE question paper will be set for 100 marks and the marks scored will be proportionately reduced to 50.
- The question paper will have ten full questions carrying equal marks.
- Each full question is for 20 marks. There will be two full questions (with a maximum of four sub-questions) from each module.
- Each full question will have a sub-question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

IPCC - Assessment Details (both CIE and SEE)

- The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 50% of the maximum marks. Minimum passing marks in SEE is 40% of the maximum marks of SEE. A student shall be deemed to have satisfied the academic requirements and earned the credits allotted to each subject/ course if the student secures not less than 50% (50 marks out of 100) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together

CIE for the theory component of IPCC

- Two Tests each of 20 Marks
- Two assignments each of 10 Marks/One Skill Development Activity of 20 marks
- Total Marks of two tests and two assignments/one Skill Development Activity added will be CIE for 60 marks, marks scored will be proportionally scaled down to 30 marks.

CIE for the practical component of IPCC

- On completion of every experiment/program in the laboratory, the students shall be evaluated and marks shall

be awarded on the same day. The 15 marks are for conducting the experiment and preparation of the laboratory record, the other 05 marks shall be for the test conducted at the end of the semester.

- The CIE marks awarded in the case of the Practical component shall be based on the continuous evaluation of the laboratory report. Each experiment report can be evaluated for 10 marks. Marks of all experiments' write-ups are added and scaled down to 15 marks.
- The laboratory test at the end /after completion of all the experiments shall be conducted for 50 marks and scaled down to 05 marks.
- Scaled-down marks of write-up evaluations and tests added will be CIE marks for the laboratory component of IPCC for 20 marks.

SEE for IPCC

- Theory SEE will be conducted by University as per the scheduled timetable, with common question papers for the course (duration 03 hours)
- The question paper will be set for 100 marks and marks scored will be scaled down proportionately to 50 marks.
- The question paper will have ten questions. Each question is set for 20 marks.
- There will be 2 questions from each module. Each of the two questions under a module (with a maximum of 3 sub-questions), should have a mix of topics under that module.
- The students have to answer 5 full questions, selecting one full question from each module.
- The theory portion of the IPCC shall be for both CIE and SEE, whereas the practical portion will have a CIE component only. Questions mentioned in the SEE paper shall include questions from the practical component.
- The minimum marks to be secured in CIE to appear for SEE shall be the 15 (50% of maximum marks-30) in the theory component and 10 (50% of maximum marks -20) in the practical component. The laboratory component of the IPCC shall be for CIE only. However, in SEE, the questions from the laboratory component shall be included. The maximum of 04/05 questions to be set from the practical component of IPCC, the total marks of all questions should not be more than the 20 marks.
- SEE will be conducted for 100 marks and students shall secure 40% of the maximum marks to qualify in the SEE. Marks secured will be scaled down to 50. (Student has to secure an aggregate of 50% of maximum marks of the course(CIE+SEE))

Professional Elective 1		Professional Elective 2	
Course Code under 20CSE24X	Course title	Course Code under 20CSE25X	Course title
22CSE231	Theory of Plates and Shells	22CSE241	Stability of Structures
22CSE232	Design of Precast & Composite Structures	22CSE242	Design of High Rise Structures
22CSE233	Earthquake resistant Structures	22CSE243	Design of Masonry Structures
22CSE234	Advanced structural analysis	22CSE244	Reliability Analysis of Structures

Note:

1 Mini Project with Seminar: This may be hands-on practice, survey report, data collection and analysis, coding, mobile app development, field visit and report preparation, modelling of system, simulation, analysing and authenticating, case studies, etc.

The CIE marks shall be awarded by a committee comprising of HoD as Chairman, Guide/co-guide, if any, and a senior faculty of the department. Students can present the seminar based on the completed mini-project. Participation in the seminar by all postgraduate students of the program shall be mandatory.

The CIE marks awarded for Mini-Project work and Seminar shall be based on the evaluation of Mini Project work and Report, Presentation skill and performance in Question and Answer session in the ratio 50:25:25. Mini-Project with Seminar shall be considered as a head of passing and shall be considered for vertical progression as well as for the award of degree. Those, who do not take-up/complete the Mini Project and Seminar shall be declared as fail in that course and have to complete the same during the subsequent semester. There is no SEE for this course.

2. Internship: All the students shall have to undergo a mandatory internship of 06 weeks during the vacation of II and III semesters. A University examination shall be conducted during III semester and the prescribed internship credit shall be counted in the same semester. The internship shall be considered as a head of passing and shall be considered for vertical progression as well as for the award of degree. Those, who do not take-up/complete the internship shall be declared as fail in the internship course and have to complete the same during the subsequent University examination after satisfying the internship requirements.

Course Code under	Course title	Course Code under	Course title
22CSE321	Design Concepts of Substructures	22CSE331	Advanced Concrete Technology
22CSE322	Composite materials	22CSE332	Fracture mechanics in Structural Engineering
22CSE323	Design of Industrial Structures	22CSE333	Retrofitting and Rehabilitation of Structures
22CSE324	Structural Health Monitoring	22CSE334	Green building Technology

Note:

1. Project Work Phase-1: The project work shall be carried out individually. However, in case a disciplinary or interdisciplinary project requires more participants, then a group consisting of not more than three shall be permitted. Students in consultation with the guide/co-guide (if any) in disciplinary project or guides/co-guides (if any) of all departments in case of multidisciplinary projects, shall pursue a literature survey and complete the preliminary requirements of the selected Project work. Each student shall prepare a relevant introductory project document, and present a seminar.

CIE marks shall be awarded by a committee comprising of HoD as Chairman, all Guide/s and co-guide/s (if any) and a senior faculty of the concerned departments. The CIE marks awarded for project work phase -1, shall be based on the evaluation of Project Report, Project Presentation skill, and performance in the Question and Answer session in the ratio of 50:25:25.

2. Societal Project: Students in consultation with the internal guide as well as with external guide (much preferable) shall involve in applying technology to workout/proposing viable solutions for societal problems.

CIE marks shall be awarded by a committee comprising of HoD as Chairman, Guide/co-guide if any, and a senior faculty of the department. The CIE marks awarded shall be based on the evaluation of Project Report, Project Presentation skill, and performance in the Question and Answer session in the ratio of 50:25:25.

Those, who have not pursued /completed the Societal Project, shall be declared as fail in the course and have to complete the same during subsequent semester/s after satisfying the Societal Project requirements. There is no SEE (University examination) for this course.

3. Internship: Those, who have not pursued /completed the internship, shall be declared as fail in the internship course and have to complete the same during subsequent University examinations after satisfying the internship requirements. Internship SEE (University examination) shall be as per the University norms.

CIE marks shall be awarded by a committee comprising of HoD as Chairman, Guide/co-guide if any, and a senior faculty of the department. The CIE marks awarded for project work phase -1, shall be based on the evaluation of Project Report, Project Presentation skill, and performance in the Question and Answer session in the ratio of 50:25:25.

Note:

1. Project Work Phase-2:

Students in consultation with the guide/co-guide (if any) in disciplinary project or guides/co-guides (if any) of all departments in case of multidisciplinary projects, shall continue to work of Project Work phase -1to complete the Project work. Each student / batch of students shall prepare project document, and present a seminar.

CIE marks shall be awarded by a committee comprising of HoD as Chairman, all Guide/s and co-guide/s (if any) and a senior faculty of the concerned departments. The CIE marks awarded for project work phase -2, shall be based on the evaluation of Project Report, Project Presentation skill, and performance in the Question and Answer session in the ratio of 50:25:25.

SEE shall be at the end of IV semester. Project work evaluation and Viva-Voce examination (SEE), after satisfying the plagiarism check, shall be as per the University norms.

Total Credits 22+18+22+18 =**80**

OPTIMIZATION TECHNIQUES [As per Choice Based Credit System (CBCS) scheme] SEMESTER – I			
Subject Code	22CSE11	CIE Marks	50
Number of Lecture Hours/Week	3:0:0	SEE Marks	50
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
Prerequisites: Engineering Mathematics			
Course objectives: The objective of this course is to make students to learn principles of optimization, To implement the optimization Concepts for the structural engineering problems. To evaluate different methods of optimization.			
Modules			
Module-1			
Introduction: Introduction to optimization, engineering applications of optimization, Formulation of structural optimization problems as programming problems. Optimization Techniques: Classical optimization techniques, single variable optimization, multivariable optimization with no constraints, unconstrained minimization techniques and algorithms constrained optimization solutions by penalty function techniques, Lagrange multipliers techniques and feasibility techniques.			
Teaching Learning Process			L1, L2,L4
Module-2			
Linear Programming: Linear programming, standard form of linear programming, geometry of linear programming problems, solution of a system of linear simultaneous equations, pivotal production of general systems of equations, simplex algorithms, revised simplex methods, duality in linear programming.			
Teaching Learning Process			L2, L4,L5
Module -3			
Non-linear programming: Non-linear programming, one dimensional minimization methods, elimination methods, Fibonacci method, golden section method, interpolation methods, quadratic and cubic methods, Unconstrained optimization methods, direct search methods, random search methods, descent methods			
Teaching Learning Process			L2, L3,L4, L5
Module -4			
Constrained optimization techniques such as direct methods, the complex methods, cutting plane method, exterior penalty function methods for structural engineering problems. Formulation and solution of structural optimization problems by different technique			
Teaching Learning Process			L2, L3,L4, L5
Module -5			

Geometric programming: Geometric programming, conversion ofNLP as a sequence of LP/ geometric programming. **Dynamic programming:** Dynamic programming conversion ofNLP as a sequence of LP/ Dynamic programming

Teaching Learning Process

L4, L5

Course outcomes:

On completion of this course, students are able to:

- Co1: Achieve Knowledge of design and development of problem solving skills.
- Co2: Understand the principles of optimization.
- Co3: Design and develop analytical skills.
- Co4: Summarize the Linear, Non-linear and Geometric Programming
- Co5: Understands the concept of Dynamic programming

Question paper pattern:

- The question paper will have ten questions.
- There will be 2 full questions (with a maximum of four sub questions) from eachmodule.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from eachmodule.

Matrix methods of Structural Analysis [As per Choice Based Credit System (CBCS) scheme] SEMESTER – I			
Subject Code	22CSE12	CIE Marks	50
Teaching Hours/Week (L:P:SDA)	3:0:0	SEE Marks	50
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
<ul style="list-style-type: none"> • Prerequisites: Engineering Mechanics • Strength of Materials • Structural Analysis • Matrix Algebra 			
Course objectives: To understand basic concepts of Matrix Methods of Structural Analysis <ul style="list-style-type: none"> • To analyse the behavior of plane trusses, continuous beams, and portal frames 			
Modules			
Module-1			
Basic concepts of structural analysis and methods of solving simultaneous equations: Introduction, Types of framed structures, Static and Kinematic Indeterminacy, Equilibrium equations, Compatibility conditions, Principle of superposition, Energy principles, Equivalent joint loads, Methods of solving linear simultaneous equations- Gauss elimination method, Cholesky method and Gauss-Siedal method.			
Teaching Learning Process			L1,L2,L3,L4
Module-2			
Fundamentals of Flexibility and Stiffness Methods: Concepts of stiffness and flexibility, Local and Global coordinates, Development of element flexibility and element stiffness matrices for truss, beam and grid elements, Force-transformation matrix, Development of global flexibility matrix for continuous beams, plane trusses and rigid plane frames, Displacement-transformation matrix, Development of global stiffness matrix for continuous beams, plane trusses and rigid plane frames.			
Teaching Learning Process			L1,L2,L3,L4
Module-3			
Analysis using Flexibility Method: Continuous beams, plane trusses and rigid plane frames			
Teaching Learning Process			L2,L3,L4,L5
Module-4			
Analysis using Stiffness Method: Continuous beams, plane trusses and rigid plane frames			
Teaching Learning Process			L2,L3,L4,L5
Module-5			

Direct Stiffness Method: Stiffness matrix for truss element in local and global coordinates, Analysis of plane trusses, Stiffness matrix for beam element, Analysis of continuous beams and orthogonal frames.	
Teaching Learning Process	L2,L3,L4,L5
Course outcomes: Upon completing this course, the students will be able to: C01: Formulate force displacement relation by flexibility and stiffness method <ul style="list-style-type: none"> • Co2: Analyze the plane trusses, continuous beams and portal frame transformation approach • Co3: Analyse the structures by direct stiffness method 	
Question paper pattern: The question paper will have ten questions; each question carries equal marks, there will be two full questions or with a maximum of four sub questions from each module, students will have to attend five full questions from each module.

MECHANICS OF DEFORMABLE BODIES [As per Choice Based Credit System (CBCS) scheme] SEMESTER - I			
Subject Code	22CSE14	CIE Marks	50
Teaching Hours/Week (L:P:SDA)	3:0:0	SEE Marks	50
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS - 03			
Prerequisites:			
Basics of Mathematics, Strength of Materials			
Course objectives:			
Course objectives: The objective of this course is to make students to learn principles of Analysis of Stress and Strain, To predict the stress-strain behaviour of continuum. To evaluate the stress and strain parameters and their inter relations of the continuum			
Modules			
Module-1			
Theory of Elasticity: Introduction: Definition of stress and strain and strain at a point, components of stress and strain at appoint of Cartesian and polar coordinates. Constitutive relations, equilibrium equations, compatibility equations and boundary conditions in 2-D and 3-D cases.			
Teaching Learning Process			L1, L2
Module-2			
Transformation of stress and strain at a point, Principal stresses and principal strains, invariants of stress and strain, hydrostatic and deviatric stress, spherical and deviatric strains max. shear strain.			
Teaching Learning Process			L2, L3
Module -3			
Plane stress and plane strain: Airy's stress function approach to 2-D problems of elasticity, simple problems of bending of beams. Solution of axisymmetric problems, stress concentration due to the presence of a circular hole in plates.			
Teaching Learning Process			L2, L3
Module -4			
Elementary problems of elasticity in three dimensions, stretching of a prismatic bar by its own weight, twist of circular shafts, torsion of non-circular sections, membrane analogy, Propagation of waves in solid media. Applications of finite difference equations in elasticity.			
Teaching Learning Process			L2, L3,L4
Module -5			

Theory of Plasticity: Stress – strain diagram in simple tension, perfectly elastic, Rigid – Perfectly plastic, Linear work – hardening, Elastic Perfectly plastic, Elastic Linear work hardening materials, Failure theories, yield conditions, stress – space representation of yield criteria through Westergard stress space, Tresca and Von- Mises criteria of yielding	
Teaching Learning Process	L1, L2
<p>Course outcomes:</p> <p>On completion of this course, students are able to:</p> <ul style="list-style-type: none"> • Co1: Achieve Knowledge of design and development of problem solving skills. • Co2: Understand the principles of stress-strain behaviour of continuum • Co3: Design and develop analytical skills. • Co4: Describe the continuum in 2 and 3- dimensions • Co5: Understand the concepts of elasticity and plasticity 	
<p>Question paper pattern:</p> <p>The question paper will have ten questions; each question carries equal marks, there will be two full questions or with a maximum of four sub questions from each module, students will have to attend five full questions from each module.</p>

STRUCTURAL DYNAMICS [As per Choice Based Credit System (CBCS) scheme] SEMESTER – I			
Subject Code	22CSE15	CIE Marks	50
Teaching Hours/Week (L:P:SDA)	3:0:2	SEE Marks	50
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 04			
Course objectives: The objective of this course is to make students to learn principles of Structural Dynamics, To implement these principles through different methods and to apply the same for free and forced vibration of structures. To evaluate the dynamic characteristics of the structures.			
Modules			
Module-1			
Introduction: Introduction to Dynamic problems in Civil Engineering, Concept of degrees of freedom, D'Alembert's principle, principle of virtual displacement and energy principles. Dynamics of Single degree-of-freedom systems: Mathematical models of Single-degree-of-freedom systems system, Freevibration response of damped and undamped systems including methods for evaluation of damping.			
Teaching Learning Process			L₁, L₂, L₅
Module-2			
Response of Single-degree-of-freedom systems to harmonic loading including support motion, vibration isolation, transmissibility. Numerical methods applied to Single-degree-of-freedom systems – Duhamel integral. Principle of vibration measuring instruments– seismometer and accelerometer.			
Teaching Learning Process			L₃, L₄, L₅
Module -3			
Dynamics of Multi-degree freedom systems: Mathematical models of multi-degree-of-freedom systems, Shear building concept, free vibration of undamped multi-degree-of- freedom systems – Natural frequencies and mode shapes – Orthogonality of modes.			
Teaching Learning Process			L₁, L₂, L₄,L₅
Module -4			
Response of Shear buildings for harmonic loading withoutdamping using normal mode approach. Response of Shearbuildings for forced vibration for harmonic loading with damping using normal mode approach.			
Teaching Learning Process			L₃, L₄, L₅
Module -5			
Approximate methods: Rayleigh's method, Dunkarley's method, Stodola's method. Dynamics of Continuous systems: Flexural vibration of beams with different end conditions. Stiffness matrix, mass matrix (lumped and consistent).			
Teaching Learning Process			L₂, L₄

Course outcomes:

On completion of this course, students are able to:

- Co1: Achieve Knowledge of design and development of problem solving skills.
- Co2: Understand the principles of Structural Dynamics
- Co3: Design and develop analytical skills.
- Co4: Summarize the Solution techniques for dynamics of Multi-degree freedomsystems
- Co5: Understand the concepts of damping in structures.

Question paper pattern:

The question paper will have ten questions; each question carries equal marks, there will be two full questions or with a maximum of four sub questions from each module, students will have to attend five full questions from each module.

RESEARCH METHODOLOGY AND IPR			
Course Code	22RMI16	CIE Marks	50
Teaching Hours/Week (L:P:SDA)	3:0:0	SEE Marks	50
Credits	03	Exam Hours	03
Module-1			
<p>Research Methodology: Introduction, Meaning of Research, Objectives of Research, Motivation in Research, Types of Research, Research Approaches, Significance of Research, Research Methods versus Methodology, Research and Scientific Method, Importance of Knowing How Research is Done, Research Process, Criteria of Good Research, and Problems Encountered by Researchers in India.</p> <p>Defining the Research Problem: Research Problem, Selecting the Problem, Necessity of Defining the Problem, Technique Involved in Defining a Problem, An Illustration.</p>			
Teaching-Learning Process	L ₁ – Remember, L ₂ – Understand		
Module-2			
<p>Reviewing the literature: Place of the literature review in research, Bringing clarity and focus to your research problem, Improving research methodology, Broadening knowledge base in research area, Enabling contextual findings, How to review the literature, searching the existing literature, reviewing the selected literature, Developing a theoretical framework, Developing a conceptual framework, Writing about the literature reviewed.</p> <p>Research Design: Meaning of Research Design, Need for Research Design, Features of a Good Design, Important Concepts Relating to Research Design, Different Research Designs, Basic Principles of Experimental Designs, Important Experimental Designs.</p>			
Teaching-Learning Process	Remember, L ₂ – Understand		
Module-3			
<p>Design of Sampling: Introduction, Sample Design, Sampling and Non-sampling Errors, Sample Survey versus Census Survey, Types of Sampling Designs.</p> <p>Measurement and Scaling: Qualitative and Quantitative Data, Classifications of Measurement Scales, Goodness of Measurement Scales, Sources of Error in Measurement Tools, Scaling, Scale Classification Bases, Scaling Technics, Multidimensional Scaling, Deciding the Scale.</p> <p>Data Collection: Experimental and Surveys, Collection of Primary Data, Collection of Secondary Data, Selection of Appropriate Method for Data Collection, Case Study Method.</p>			
Teaching-Learning Process	L ₁ – Remember, L ₂ – Understand		
Module-4			
<p>Testing of Hypotheses: Hypothesis, Basic Concepts Concerning Testing of Hypotheses, Testing of Hypothesis, Test Statistics and Critical Region, Critical Value and Decision Rule, Procedure for Hypothesis Testing, Hypothesis Testing for Mean, Proportion, Variance, for Difference of Two Mean, for Difference of Two Proportions, for Difference of Two Variances, P-Value approach, Power of Test, Limitations of the Tests of Hypothesis.</p> <p>Chi-square Test: Test of Difference of more than Two Proportions, Test of Independence of Attributes, Test of Goodness of Fit, Cautions in Using Chi Square Tests.</p>			
Teaching-Learning Process	L ₁ – Remember, L ₂ – Understand		
Module-5			
<p>Interpretation and Report Writing: Meaning of Interpretation, Technique of Interpretation, Precaution in Interpretation, Significance of Report Writing, Different Steps in Writing Report, Layout of the Research Report, Types of Reports, Oral Presentation, Mechanics of Writing a Research Report, Precautions for Writing Research Reports.</p> <p>Intellectual Property: The Concept, Intellectual Property System in India, Development of TRIPS Complied Regime in India, Patents Act, 1970, Trade Mark Act, 1999, The Designs Act, 2000, The Geographical Indications of Goods (Registration and Protection) Act 1999, Copyright Act, 1957, The Protection of Plant Varieties and Farmers' Rights Act, 2001, The Semi-Conductor Integrated Circuits Layout Design Act, 2000, Trade Secrets, Utility Models, IPR and Biodiversity, The Convention on Biological Diversity (CBD) 1992, Competing Rationales for Protection of IPRs, Leading International Instruments Concerning IPR, World Intellectual Property Organisation (WIPO), WIPO and WTO, Paris Convention for the Protection of Industrial Property, National Treatment, Right of Priority, Common Rules, Patents, Marks, Industrial Designs, Trade Names, Indications of Source, Unfair Competition, Patent Cooperation Treaty (PCT), Advantages of PCT Filing, Berne Convention for the Protection of Literary and Artistic Works, Basic Principles, Duration of Protection, Trade Related Aspects of Intellectual Property Rights (TRIPS) Agreement, Covered under TRIPS Agreement, Features of the Agreement, Protection of Intellectual Property under TRIPS, Copyright and Related Rights, Trademarks, Geographical indications, Industrial Designs, Patents, Patentable Subject Matter, Rights Conferred, Exceptions, Term of protection, Conditions on Patent Applicants, Process Patents, Other Use without Authorization of the Right Holder, Layout-Designs of Integrated Circuits, Protection of Undisclosed Information, Enforcement of Intellectual Property Rights, UNSECO.</p>			
Teaching-Learning Process	L ₁ – Remember, L ₂ – Understand		

STRUCTURAL ENGINEERING LAB-1 [As per Choice Based Credit System (CBCS) scheme] SEMESTER – I			
Subject Code	22CSEL17	CIE Marks	50
Teaching Hours/Week (L:P:SDA)	1:2:0	SEE Marks	50
Total Number of Lecture Hours	42	Exam Hours	03
CREDITS – 02			
Prerequisites: Concrete Technology, Special Concrete, Structural Analysis, Structural Dynamics.			
Course objectives: The objective of this course is to make students to learn principles of design of experiments, To investigate the performance of structural elements. To evaluate the different testing methods and equipments.			
Modules	Teaching Hours	RBT Level	
1. Experiments on Concrete, including Mix design	12 Hrs	L1, L2, L3, L4, L5, L6	
2. Testing of beams for deflection, flexure and shear	12 Hrs		
3. Experiments on vibration of multi storey frame models for Natural frequency and modes.	12 Hrs		
4. Use of Non destructive testing (NDT) equipments – Rebound hammer, Ultra sonic pulse velocity meter and Profometer	06Hrs		
Course outcomes: On complete of this course the students will able to Co1: Achieve Knowledge of design and development of experimenting skills. Co2: Understand the principles of design of experiments Co3: Design and develop analytical skills. Co4: Summarize the testing methods and equipment's.

ADVANCED DESIGN OF STEEL STRUCTURES [As per Choice Based Credit System (CBCS) scheme] SEMESTER - II			
Subject Code	22CSE21	CIE Marks	50
Teaching Hours / Week (L:P:SDA)	3:0:0	SEE Marks	50
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS - 03			
<p>Prerequisites: Engineering Mechanics</p> <ul style="list-style-type: none"> • Strength of Materials • Structural Analysis • Design of Steel structures 			
<p>Course objectives: This course will enable students to</p> <ol style="list-style-type: none"> 1. Understand the background to the design provisions for hot-rolled and cold-formed steel structures, including the main differences between them. 2. Proficiency in applying the provisions for design of columns, beams, beam-columns 3. Design structural sections for adequate fire resistance 			
Modules			
Module-1			
Laterally Unrestrained Beams:			
Lateral Buckling of Beams, Factors affecting lateral stability, IS 800 code provisions, Design Approach. Lateral buckling strength of Cantilever beams, continuous beams, beams with continuous and discrete lateral restraints, Mono-symmetric and non-uniform beams – Design Examples. Concepts of -Shear Center, Warping, Uniform and Non-Uniform torsion.			
Teaching Learning Process			L1, L2, L3L4, L5
Module-2			
Beam- Columns in Frames: Behaviour of Short and Long Beam - Columns, Effects of Slenderness Ratio and Axial Force on Modes of Failure, Biaxial bending, Strength of Beam Columns, Sway and Non-Sway Frames, Strength and Stability of rigid jointed frames, Effective Length of Columns-, Methods in IS 800 - Examples			
Teaching Learning Process			L1, L2, L3L4, L5
Module -3			
Steel Beams with Web Openings: Shape of the web openings, practical guide lines, and Force distribution and failure patterns. Analysis of beams with perforated thin and thick webs, Design of laterally restrained castellated beams for given sectional properties. Vierendeel girders (design for given analysis results).			
Teaching Learning Process			L1, L2, L3L4, L5
Module -4			
Cold formed steel sections: Techniques and properties, Advantages, Typical profiles, Stiffened and unstiffened elements, Local buckling effects, effective section properties, IS 801& 811 code provisions- numerical examples, beam design, column design.			
Teaching Learning Process			L1, L2, L3L4, L5

Module -5

Fire resistance: Fire resistance level, Period of Structural Adequacy, Properties of steel with temperature, Limiting Steel temperature, Protected and unprotected members, Methods of fire protection, Fire resistance Ratings. Numerical Examples.

Teaching Learning Process

L1, L2, L3L4, L5

Course outcomes: After studying this course, students will be able to:

- Co1: Able to understand behavior of Light gauge steel members
- Co2: Able to understand design concepts of cold formed/unrestrained beams
- Co3: Able to understand Fire resistance concept required for present days.
- Co4: Able to analyze beam column behavior

Question paper pattern:

IS 800: 2007, IS 801-2010, IS811-1987 and BS5950 – part 8 to be allowed along with Steel Tables in Exam.

The question paper will have ten questions; each question carries equal marks, there will be two full questions or with a maximum of four sub questions from each module, students will have to attend five full questions from each module.

Reference Books:

FINITE ELEMENT METHOD OF ANALYSIS [As per Choice Based Credit System (CBCS) scheme] SEMESTER – II			
Subject Code	22CSE22	CIE Marks	50
Teaching Hours/Week (L:P:SDA)	3:2:0	SEE Marks	50
Total Number of Lecture Hours	50	Exam Hours	03
CREDITS – 04			
Prerequisites: Computational structural Mechanics <ul style="list-style-type: none"> Theory of Elasticity 			
Course objectives: <ul style="list-style-type: none"> To provide the fundamental concepts of the theory of the finite element method To develop proficiency in the application of the finite element method (modeling, analysis, and interpretation of results) to realistic engineering problems through the use of softwares Course objectives: (LAB) <ul style="list-style-type: none"> The objective of this course is to make students To analyze the structure using FE based Software To learn principles of design To investigate the performance of structural elements. To design the structural components using excel sheets 			
Modules			
Module-1			
Basic concepts of elasticity, Kinematic and Static variables for various types of structural problems, approximate methods of structural analysis–Rayleigh–Ritz method, Finite difference method, Finite element method. Variation method and minimization of Energy approach of element formulation, Principles of finite element method, advantages and disadvantages, Finite element procedure, Finite elements used for one, two and three dimensional problems, C0, C1 and C2 type elements, Element aspect ratio, Mesh refinement vs. higher order elements, Numbering of nodes to minimize bandwidth. Lab Experiment 1 and 2			
Teaching Learning Process			L1, L2
Module-2			
Nodal displacement parameters, Convergence criterion, Compatibility requirements, Geometric invariance, Shapefunction, Polynomial form of displacement function, Generalized and Natural coordinates, Lagrangian interpolation function, shape functions for one, two & three dimensional elements. Lab Experiment 3 and 4			
Teaching Learning Process			L1, L2, L4, L5
Module -3			

Isoparametric elements, Internal nodes and higher order elements, Serendipity and Lagrangian family of Finite Elements, Sub-parametric and Super-parametric elements, Condensation of internal nodes, Jacobian transformation Matrix, Development of strain-displacement matrix and stiffness matrix, consistent load vector, numerical integration.	
Lab Experiment 5 and 6	
Teaching Learning Process	L1, L2,L4, L5
Module -4	
Application of Finite Element Method for the analysis of one& twodimensional problems: Analysis of plane trusses and beams, Application to plane stress/strain, Axisymmetric problems using CST and Quadrilateral Elements	
Lab Experiment 7 and 8	
Teaching Learning Process	L1, L2, L3, L4,L5
Module -5	
Application to Plates and Shells, Non-linearity: material, geometric and combined non-linearity, Techniques for Non-linear Analysis.	
Lab Experiment 9 and 10	
Teaching Learning Process	L1, L2
<p>Course Outcome: After successful completion of this the course, students shall be able to:</p> <ul style="list-style-type: none"> • Co1: Explain the basic theory behind the finite element method. • Co2: Formulate force-displacements relations for 2-D elements • Co3: Use the finite element method to analyze real structures. • Co4: Use a Finite Element based program for structural analysis 	
<p>Question paper pattern: The question paper will have ten questions; each question carries equal marks, there will be two full questions or with a maximum of four sub questions from each module, students will have to attend five full questions from each module.</p>

Note:

- Experiment # 1: Analysis and Design of Simple Multistoried structure using any commercially available FEA packages
- Experiment # 2: Analysis and Design of Simple Multistoried structure with earthquake load using any commercially available FEA packages
- Experiment # 3: Analysis and Design of Simple shell structure using any commercially available FEA packages
- Experiment # 4: Analysis and Design of Simple plate structure using any commercially available FEA packages
- Experiment # 5: Analysis and Design of Simple overhead RCC water tanks using any commercially available FEA packages
- Experiment # 6: Analysis and Design of Simple doglegged/ open well/ spiral staircase using any commercially available FEA packages
- Experiment # 7: Analysis and Design of simple bridge decks under IRC loading using any commercially available FEA packages
- Experiment # 8: Analysis and Design of simple multistoried steel framed structures using any commercially available FEA packages
- Experiment # 9: Computation of fire resisting capacity parameters of steel beams using Excel spread sheet/ MatLab programming soft-computing techniques.
- Experiment # 10: Analysis of Unrestrained steel beams as per IS 800-2007 norms using Excel spread sheets / MatLab programming soft-computing techniques.

THEORY OF PLATES AND SHELLS			
[As per Choice Based Credit System (CBCS) scheme]			
SEMESTER – II			
Subject Code	22CSE231	CIE Marks	50
Number of Lecture Hours/Week	3:0:0	SEE Marks	50
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
Prerequisites: Strength of Materials and Mechanics of Deformable Bodies			
Course objectives: The objective of this course is to make students to learn different methods of analysis and design of plates and shells, To critically detail the plates, folded plates and shells. To evaluate the performance of spatial structures.			
Modules			
Module-1			
Introduction to plate theory, Small deflection of laterally loaded thin rectangular plates for pure bending. Navier's and Levy's solution for various lateral loading and boundary conditions (No derivation), Numerical examples			
Teaching Learning Process			L1, L2
Module-2			
Energy methods for rectangular and circular plates with clamped edges subjected to symmetric loadings.			
Teaching Learning Process			L2, L3
Module -3			
Introduction to curved surfaces and classification of shells, Membrane theory of spherical shells, cylindrical shells, hyperbolic paraboloids, elliptic paraboloid and conoids.			
Teaching Learning Process			L2, L3
Module -4			
Axially symmetric bending of shells of revolution, Closed cylindrical shells, water tanks, spherical shells and Geckler's approximation. Bending theory of doubly curved shallow shells.			
Teaching Learning Process			L2, L3
Module -5			
Design and detailing of folded plates with numerical examples Design and Detailing of simple shell problems – spherical domes, water tanks, barrel vaults and hyperbolic paraboloid roofs			
Teaching Learning Process			L2, L3,L4

Course outcomes:

On completion of this course, students are able to:

- Co1: Achieve Knowledge of design and development of problem solving skills.
- Co2: Understand the principles of Analysis and Design
- Co3: Design and develop analytical skills.
- Co4: Summarize the performance of shells
- Co5: Understand the concepts of energy principle.

Question paper pattern:

- The question paper will have ten questions.
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

Design of Precast & Composite Structures [As per Choice Based Credit System (CBCS) scheme] SEMESTER -II			
Subject Code	22CSE232	CIE Marks	50
Teaching Hours/Week (L:P:SDA)	3:0:0	SEE Marks	50
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS - 03			
Prerequisites: Basics of Strength of materials, Structural Analysis			
Course objectives:			
<ol style="list-style-type: none"> 1. Understand the concepts and techniques of precast construction and Select or design precast elements suitable for project specific requirements 2. Design precast systems to ensure integrity and safety of the structure and to avoid progressive collapse and Design composite floors and beam elements 			
Modules			
Module-1			
Concepts, components, Structural Systems and Design of precast concrete floors			
Need and types of precast construction, Modular coordination, Precast elements- Floor, Beams, Columns and walls. Structural Systems and connections.			
Design of precast Concrete Floors: Theoretical and Design Examples of Hollow core slabs. Precast Concrete Planks, floor with composite toppings with and without props.			
Teaching Learning Process			L1,L2
Module-2			
Design of precast reinforced and pre-stressed Concrete Beams Theoretical and Design Examples of ITB – Full section precast, Semi Precast, propped and unpropped conditions.			
Design of RC Nibs			
Teaching Learning Process			L3,L4
Module -3			
Design of precast concrete columns and walls Design of braced and unbraced columns with corbels subjected to pattern and full loading. Design of Corbels Design of RC walls subjected to Vertical, Horizontal loads and moments, Design of vertical ties and horizontal joints.			
Teaching Learning Process			L3,L4
Module -4			
Design of Precast Connections and Structural Integrity Beambearing, Beam half Joint, Steel Inserts, Socket Connection, Structural integrity, Avoidance of progressive collapse, Design of Structural Ties.			
Teaching Learning Process			L3,L4
Module -5			

EARTHQUAKE RESISTANT STRUCTURES [As per Choice Based Credit System (CBCS) scheme] SEMESTER - II			
Subject Code	22CSE233	CIE Marks	50
Teaching Hours/Week (L:P:SDA)	3:0:0	SEE Marks	50
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS - 03			
Prerequisites:			
<ul style="list-style-type: none"> • Structural Dynamics 			
Course objectives:			
The objective of this course is to make students to learn principles of engineering seismology, To design the reinforced concrete buildings for earthquake resistance. To evaluate the seismic response of the structures			
Modules			
Module-1			
Introduction to engineering seismology, Geological and tectonic features of India, Origin and propagation of seismic waves, characteristics of earthquake and its quantification – Magnitude and Intensity scales, seismic instruments. Earthquake Hazards in India, Earthquake Risk Evaluation and Mitigation. Structural behavior under gravity and seismic loads, Lateral load resisting structural systems, Requirements of efficient earthquake resistant structural system, damping devices, base isolation systems.			
Teaching Learning Process			L1, L2
Module-2			
The Response history and strong motion characteristics. Response Spectrum – elastic and inelastic response spectra, tripartite (D-V-A) response spectrum, use of response spectrum in earthquake resistant design. Computation of seismic forces in multi-storied buildings – using procedures (Equivalent lateral force and dynamic analysis) as per IS-1893.			
Teaching Learning Process			L2, L3,L4, L5
Module -3			
Structural Configuration for earthquake resistant design, Concept of plan irregularities and vertical irregularities, Soft storey, Torsion in buildings. Design provisions for these in IS-1893. Effect of infill masonry walls on frames, modeling concepts of infill masonry walls. Behaviour of masonry buildings during earthquakes, failure patterns, strength of masonry in shear and flexure, Slenderness concept of masonry walls, concepts for earthquake resistant masonry buildings – codal provisions.			
Teaching Learning Process			L2, L4,L5
Module -4			

Design of Reinforced concrete buildings for earthquake resistance-Load combinations, Ductility and energy absorption in buildings. Confinement of concrete for ductility, design of columns and beams for ductility, ductile detailing provisions as per IS1893. Structural behavior, design and ductile detailing of shear walls.	
Teaching Learning Process	L2, L4,L5
Module -5	
Seismic response control concepts – Seismic demand, seismic capacity, Overview of linear and nonlinear procedures of seismic analysis. Performance Based Seismic Engineering methodology, Seismic evaluation and retrofitting of structures.	
Teaching Learning Process	L2, L5,L6
<p>Course Outcome: On completion of this course, students are able to:</p> <ul style="list-style-type: none"> • Co1: Achieve Knowledge of design and development of problem solving skills. • Co2: Understand the principles of engineering seismology • Co3: Design and develop analytical skills. • Co4: Summarize the Seismic evaluation and retrofitting of structures. • Co5: Understand the concepts of earthquake resistance of reinforced concrete buildings. 	
<p>Question paper pattern: The question paper will have ten questions; each question carries equal marks, there will be two full questions or with a maximum of four sub questions from each module, students will have to attend five full questions from each module.</p>

ADVANCED STRUCTURAL ANALYSIS [As per Choice Based Credit System (CBCS) scheme] SEMESTER - 2			
Subject Code	22CSE234	CIE Marks	50
Teaching Hours/Week(L:P:SDA)	3:0:0	SEE Marks	50
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS - 03			
Prerequisites: Strength of Materials and Structural Analysis			
Course objectives: Students will be given provided with the knowledge of mathematics, science, and engineering in the in the analysis of following structural systems curved beams, Beams on elastic foundation, shear centre and unsymmetrical bending and buckling of non-prismatic columns and beam column.			
Modules			
Module-1			
Curved Beams: Curved beams, Introduction, assumptions, derivation of WINKLER BACH equation, Radius to the neutral surface of simple geometric figures, Limitation, Stress distribution in open curved members such as Hooks and chain links, Stress distribution in closed rings and chain links. Deformations of open and closed rings.			
Teaching Learning Process			L1,L2,L3,L4
Module-2			
Beams on Elastic Foundations: Governing differential equation for elastic line, Interpretation of constants, Infinite beam with point load, moment & UDL with problems. Semi-infinite beams with point load and moment UDL with problems over fixed and hinged support conditions.			
Teaching Learning Process			L1,L2,L3,L4
Module -3			
Shear Centre: Concept of shear center in torsion induced bending of beams, expression to the Shear Centre for Symmetrical and Unsymmetrical Sections, Derivation of shear centre for angles, channel, semicircular and built-up sections with numerical problems			
Teaching Learning Process			L1,L2,L3,L4
Module -4			
Unsymmetrical Bending (Asymmetrical Bending): Theory behind unsymmetrical bending, Assumptions, obtaining the stresses in beams, simply supported and cantilever unsymmetrical beams subjected to inclined loading, Deflections of unsymmetrical simply supported and cantilever beams with numerical problems.			
Teaching Learning Process			L1,L2,L3,L4
Module -5			
Buckling of Non Prismatic Columns and Beam-Column: Principle behind Euler's theory of buckling, Governing differential equation applied to buckling of columns and evaluation of constants for various boundary conditions, Obtaining the characteristic equation for the buckling load of non-prismatic compound columns, Analysis of Beam-column, conceptual theory of magnification stresses and deformations subjected to axial and different types of lateral loads with numerical problems.			

Teaching Learning Process	L1,L2,L3,L4
<p>Course Outcomes: Students will be able to</p> <ul style="list-style-type: none"> • Co1: Apply Winkler Bach and Strain Energy principles to obtain stresses and deformation in curved members • Co2: Derive the expressions to Foundation pressure, Deflection, Slope, BM and SF of infinite and semi-infinite Beams resting on Elastic Foundation • Co3: Obtain the equations for the shear centre for symmetrical and unsymmetrical from fundamental. • Co4: Extrapolate the bending theory to calculate the stresses and deformations in unsymmetrical bending. • Co5: Develop the characteristic equation for the buckling load of compound column and stresses and deformations in beam-column 	
<p>Question paper pattern: The question paper will have ten questions; each question carries equal marks, there will be two full questions or with a maximum of four sub questions from each module, students will have to attend five full questions from each module.</p>

STABILITY OF STRUCTURES [As per Choice Based Credit System (CBCS) scheme] SEMESTER – II			
Subject Code	22CSE241	CIE Marks	50
Number of Lecture Hours/Week	03	SEE Marks	50
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
Prerequisites: Strength of Materials, Finite Element Analysis and Theory of Elasticity			
Course objectives: The objective of this course is to make students to learn principles of stability of structures, To analyse the structural elements for stability. To evaluate the use of strain energy in plate bending and stability.			
Modules			
Module-1			
Beam – Column Differential equation. Beam column subjected to (i) lateral concentrated load, (ii) several concentrated loads, (iii) continuous lateral load. Application of trigonometric series, Euler's formulation using fourth order differential equation for pinned – pinned, fixed – fixed, fixed – free and fixed – pinned column.			
Teaching Learning Process			L1, L2
Module-2			
Buckling of frames and continuous beams. Elastic Energy method: Approximate calculation of critical loads for a cantilever. Exact critical load for hinged – hinged column using energy approach. Buckling of bar on elastic foundation. Buckling of cantilever column under distributed loads. Determination of critical loads by successive approximation. Bars with varying cross section. Effect of shear force on critical load. Column subjected to pulsating forces.			
Teaching Learning Process			L2, L3
Module -3			
Stability analysis by finite element approach Derivation of shape function for a two noded Bernoulli–Euler beam element (lateral and translation of) – element stiffness and element geometric stiffness matrices – assembled stiffness and geometricstiffness matrices for a discretised column with different boundary condition – calculation of critical loads for a discretised (two elements) column (both ends built in). Buckling of pin jointed frames (maximum of two active DOF) – symmetrical single bay portal frame.			
Teaching Learning Process			L2, L3,L4
Module -4			

DESIGN OF HIGH RISE STRUCTURES [As per Choice Based Credit System (CBCS) scheme] SEMESTER – II			
Subject Code	22CSE242	CIE Marks	50
Teaching Hours/Week (L:P:SDA)	3:0:0	SEE Marks	50
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
Prerequisites: Special Concrete and Structural Dynamics			
Course objectives: The objective of this course is to make students to learn principles of stability of tall buildings, To design the tall buildings for earthquake and wind resistance. To evaluate the performance of tall structures for strength and stability			
Modules			
Module-1			
Design Criteria: Design philosophy, loading, sequential loading, and materials – high performance concrete, fiber reinforced concrete, lightweight concrete, design mixes. Loading and Movement: Gravity loading: Dead and live load, methods of live load reduction, Impact, Gravity loading, Construction loads			
Teaching Learning Process			L1, L2
Module-2			
Wind loading: static and dynamic approach, Analytical and wind tunnel experimentation method. Earthquake loading: Equivalent lateral force, modal analysis, combinations of loading, working stress design, Limit state design, Plastic design.			
Teaching Learning Process			L1, L3, L4, L5
Module -3			
Behavior of Various Structural Systems: Factors affecting growth, Height and structural form; High rise behavior, Rigid frames, braced frames, in-filled frames, shear walls, coupled shear walls, wall-frames, tubular, cores, Futigger – braced and hybrid mega system.			
Teaching Learning Process			L2, L3
Module -4			
Analysis and Design: Modeling for approximate analysis, accurate analysis and reduction techniques, analysis of building as total structural system considering overall integrity and major subsystem interaction, analysis for member forces; drift and twist, computerized general three dimensional analyses.			
Teaching Learning Process			L2, L3, L4
Module -5			
Stability of Tall Buildings: Overall buckling analysis of frames, wall frames, approximate methods, second order effects of gravity of loading, P-Delta analysis, simultaneous first order and P-Delta analysis, Transnational, Torsional instability, out of plum effects, stiffness of member in stability, effect of foundation rotation. Structural elements: sectional shapes, properties and resisting capacities, design, deflection, cracking, pre-stressing, shear flow. Design for differential movement, creep and shrinkage effects, temperature effects and fire.			
Teaching Learning Process			L2, L3, L4, L5

Course outcomes: On completion of this course, students are able to:

Co1: Achieve Knowledge of design and development of problem solving skills.

Co2: Understand the principles of strength and stability

Co3: Design and develop analytical skills.

Co4: Summarize the behavior of various structural systems.

Co5: Understand the concepts of P-Delta analysis

Question paper pattern:The question paper will have ten questions; each question carries equal marks, there will be two full questions or with a maximum of four sub questions from each module, students will have to attend five full questions from each module.

DESIGN OF MASONRY STRUCTURES [As per Choice Based Credit System (CBCS) scheme] SEMESTER - II			
Subject Code	22CSE243	CIE Marks	50
Number of Lecture Hours/Week	03	SEE Marks	50
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS - 03			
Prerequisites: Construction Technology and Strength of Materials			
Course objectives:			
The objective of this course is to make students <ul style="list-style-type: none"> • To learn performance of masonry structures, • To design the masonry structures for earthquake resistance. • To evaluate the strength and stability of the masonry structures 			
Modules			
Module-1			
Introduction, Masonry units, materials and types:			
History of masonry, Masonry units – Brick- Types of bricks, Tests conducted on bricks. Other masonry units - stone, clay block, concrete block, laterite block, stabilized mud block masonry units Masonry materials – Classification and properties of mortars, selection of mortars. Cracks - Cracks in masonry structures, Type of crack, causes and prevention of crack.			
Teaching Learning Process			L1,L2
Module-2			
Strength of Masonry in Compression:			
Behaviour of Masonry under compression, strength and elastic properties, influence of masonry unit and mortar Characteristics, effect of masonry unit height on compressive strength, influence of masonry bonding patterns on strength, prediction of strength of masonry in Indian context, Failure theories of masonry under Compression. Effects of slenderness and eccentricity, effect of rate of absorption, effect of curing, effect of ageing, workmanship on compressive strength			
Masonry Bond Strength and Masonry in Shear and Flexure			
Bond between masonry unit and mortar, tests for determining flexural and shear bond strengths, factors affecting bond strength, effect of bond strength on compressive strength, orthotropic strength properties of masonry in flexure, shear strength of masonry, test procedures for evaluating flexural and shear strength.			
Teaching Learning Process			L2,L3
Module-3			

Design of load bearing masonry wall	
Permissible stresses: Types of walls, permissible compressive stress, stress reduction and shape modification factors, increase in permissible stresses for eccentric vertical and lateral load, permissible tensile stress and shear stresses. Design Considerations: Effective height of walls and columns, openings in walls, effective length, effective thickness, slenderness ratio, eccentricity, load dispersion, arching action in lintels. Problems on design considerations for solid walls, cavity walls, wall with pillars.	
Load considerations and design of Masonry subjected to axial loads: Design criteria, design examples of walls under UDL, solid walls, cavity walls, solid wall supported at the ends by cross wall, walls with piers.	
Teaching Learning Process	L2,L3,L4,L5
Module-4	
Design of walls subjected to concentrated axial loads: Solid walls, cavity walls, solid wall supported at the ends by crosswall, walls with piers, design of wall with openings. Design of walls subjected to eccentric loads: Design criteria – stress distribution under eccentric loads – problems on eccentrically loaded solid walls, cavity walls, walls with piers.	
Design of Laterally and transversely loaded walls: Design criteria, design of solid wall under wind loading, design of shear wall – design of compound walls.	
Teaching Learning Process	L2,L3,L4,L5
Module-5	
Earthquake resistant masonry buildings:	
Behaviour of masonry during earthquakes, concepts and design procedure for earthquake resistant masonry, BIS codal provisions. In- filled frames: Types – modes of failures	
Reinforced brick masonry	
Methods of reinforcing Masonry, Analysis of reinforcedMasonry under axial, flexural and shear loading.	
Teaching Learning Process	L2,L3,L4,L5
On completion of this course, students are able to:	
<ul style="list-style-type: none"> • Co1: Achieve Knowledge of design and development of problem solving skills. • Co2: Understand the principles of design and construction of masonry structures • Co3: Design and develop analytical skills. • Co4: Summarize the masonry Characteristics. • Co5: Evaluate the strength and stability of the masonry structures. 	
Reference book	
<ul style="list-style-type: none"> • Henry, A.W., “Structural Masonry”, Macmillan Education Ltd., 1990. • K.S. Jagadish, “Structural masonry”, I.K. International Publishing House Pvt. Ltd • Dayaratnam P, “Brick and Reinforced Brick Structures”, Oxford & IBH, 1987. • M. L. Gambhir, “Building and Construction Materials”, Mc Graw Hill education Pvt.Ltd. 	
Guidelines	
<ul style="list-style-type: none"> • IS 1905–1987 “Code of practice for structural use of un-reinforced masonry-(3rd revision) BIS, New Delhi. • SP 20 (S&T) – 1991, “Hand book on masonry design and construction (1st revision) BIS, New Delhi. 	

Question paper pattern:

- The question paper will have ten questions.
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

RELIABILITY ANALYSIS OF STRUCTURES [As per Choice Based Credit System (CBCS) scheme] SEMESTER - II			
Subject Code	22CSE244	CIE Marks	50
Teaching Hours/Week (L:P:SDA)	3:0:0	SEE Marks	50
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS - 03			
Prerequisites: Knowledge of Engineering Statistics and basics of structural analysis and RCC			
Course objectives:			
<ol style="list-style-type: none"> 1. To impart the concept knowledge on data analysis and probability in the context of structural engineering. 2. To demonstrate uncertainty in structural engineering with respect to randomness of variables and knowledge of probability distributions. 3. To demonstrate principles of structural reliability in order to assess safety due to randomness of variables. 4. To perform computations of structural reliability using various methods at component and system level. 			
Modules			
Module-1			
Preliminary Data Analysis: Graphical representation- Histogram, frequency polygon, Measures of central tendency- grouped and ungrouped data, measures of dispersion, measures of asymmetry. Curve fitting and Correlation: Fitting a straight line, curve of the form $y = ab^x$, and parabola, Coefficient of correlation.			
Teaching Learning Process			L2, L3, L4
Module-2			
Probability Concepts: Random events-Sample space and events, Venn diagram and event space, Measures of probability interpretation, probability axioms, addition rule, multiplication rule, conditional probability, probability tree diagram, statistical independence, total probability theorem and Baye's theorem.			
Teaching Learning Process			L2, L4
Module -3			
Random variables: Probability mass function, probability density function, Mathematical expectation, Chebyshev's theorem. Probability distributions: Discrete distributions- Binomial and Poison distributions, Continuous distributions- Normal, Log normal distributions.			
Teaching Learning Process			L2, L4
Module -4			
Reliability Analysis: Measures of reliability-factor of safety, safety margin, reliability index, performance function and limiting state. Reliability Methods-First Order Second Moment Method (FOSM), Point Estimate Method (PEM), and Advanced First Order Second Moment Method (Hasofer-Lind's method).			

Mini Project with Seminar

DESIGN OF BRIDGES			
[As per Choice Based Credit System (CBCS) scheme]			
SEMESTER – III			
Subject Code	22CSE31	CIE Marks	50
Teaching Hours/Week (L:P:SDA)	3:0:2	SEE Marks	50
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 04			
Prerequisites:			
<ul style="list-style-type: none"> • Structural Analysis • Highway Engineering • Design of RC Structures 			
Course objectives:			
<ul style="list-style-type: none"> • The students will be exposed to the Engineering aspects of concrete bridges • Various loads that act on the bridges as per IRC. • Analysis for the maximum BM and SF at critical section using load distributing theories. • Design of various components using limit state method with reinforcement details. 			
Modules			
Module-1			
Introduction & Design of Slab Culvert:			
Bridge Engineering and its development in past, Ideal site selection for Bridges, Bridge classifications, Forces acting on Bridge. Analysis for maximum BM and SF at critical sections for Dead and Live load as per IRC class A, B, AA tracked and wheeled vehicles. Structural design of slab culvert using limit state method with reinforcement details.			
Teaching Learning Process			L2, L3
Module-2			
Box Culvert: Introduction to box culvert, advantage of structural continuity, Analysis for maximum BM and SF at critical sections using moment distribution method for various load combinations such as Dead, Surcharge, Soil, Water and Live load as per IRC class A, B, AA tracked and wheeled vehicles. Structural design of box culvert using limit state method with reinforcement details.			
Teaching Learning Process			L2, L3
Module -3			

T Beam Bridge:	
Components of T Beam Bridge, Load transfer mechanism, Proportioning the of Components, Analysis of Slab using PigeaudsMethod for maximum BM and SF at critical sections for Dead and Live load as per IRC class A, B, AA tracked and wheeled vehicles and design of Slab using limit state method with reinforcement details. Analysis of Cross Girder for maximum BM and SF at critical sections for Dead and Live load as per IRC class A, B, AA tracked and wheeled vehicles and design of slab using limit state method with reinforcement details. Analysis of Main Girder using Courbon's Method for maximum BM and SF at critical sections for Dead and Live load as per IRC class A, B, AA tracked and wheeled vehicles and design of Main Girder using limit state method with reinforcement details.	
Teaching Learning Process	L3, L4
Module -4	
PSC Bridge:	
Introduction to Pre & Post Tensioning, Proportioning of Components, Analysis & Structural Design of Slab, Analysis of Main Girder Using Courbon's Method for IRC Class AA, Tracked vehicle, Calculations of Prestressing Force, Calculations of Stresses, Cable profile, Design of End Block, Detailing of Main Girder.	
Teaching Learning Process	L3, L4
Module -5	
Balanced Cantilever Bridge:	
Introduction & Proportioning of Components, Analysis of Main Girder Using Courbon's Method for IRC Class AA, Tracked vehicle Design of Simply Supported Portion, Cantilever Portion, Articulation, using limit state method with reinforcement details.	
Teaching Learning Process	L3, L4
Course outcomes:	
After studying this course, students will be able to:	
<ul style="list-style-type: none"> • Co1:Describe historical growth, select ideal site and bridge, calculate values of design parameters of slab culvert at critical section as per IRC, design and detailing required for the execution of the project. • Co2:Carry out analysis of box culvert as per IRC to obtain the values of design parameters and to design and detail the components following IS code procedure. • Co3:Demonstrate the use of Pigeauds Method and Courbon's Method in the analysis of T beam bridge as per IRC, design to obtain the safe dimensions various components, optimum reinforcement required following IS code procedure. • Co4:Display the use of Courbon's Method in the analysis of PSC bridge as per IRC, design to obtain the safe value of prestressing force, obtain the dimensions of various components to keep the stresses within codal provisions following IS code procedure. • Co5:Analysis a balanced cantilever bridge as per IRC and to obtain the safe values of design parameters and to design and detail the components as per IS code procedure 	

DESIGN CONCEPTS OF SUBSTRUCTURES			
[As per Choice Based Credit System (CBCS) scheme]			
SEMESTER – III			
Subject Code	22CSE321	CIE Marks	50
Teaching Hours/Week (L:P:SDA)	3:0:0	SEE Marks	50
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
Prerequisites: Basic Knowledge of geotechnical Engineering and Structural Analysis			
Course objectives: The objective of this course is to make students to learn principles of subsoil exploration, To design the sub structures. To evaluate the soil shear strength parameters.			
Modules			
Module-1			
Introduction, Site investigation, In-situ testing of soils, Subsoil exploration, Classification of foundations systems. General requirement of foundations, Selection of foundations, Computations of Loads, Design concepts.			
Teaching Learning Process			L2, L4,L5
Module-2			
Concept of soil shear strength parameters, Settlement analysis of footings, Shallow foundations in clay, Shallow foundation in sand & C- Φ soils, Footings on layered soils and sloping ground, Design for Eccentric or Moment Loads			
Teaching Learning Process			L2, L4,L5
Module -3			
Types of rafts, bearing capacity & settlements of raft foundation, Rigid methods, Flexible methods, soil structure interaction, different methods of modeling the soil. Combined footings (rectangular & trapezoidal), strap footings & wall footings, Raft – super structure interaction effects & general concepts of structural design, Basement slabs			
Teaching Learning Process			L2, L4,L5
Module -4			
Deep Foundations: Load Transfer in Deep Foundations, Types of Deep Foundations, Ultimate bearing capacity of different types of piles in different soil conditions, Laterally loaded piles, tension piles & batter piles, Pile groups: Bearing capacity, settlement, uplift capacity, load distribution between piles, Proportioning and design concepts of piles.			
Teaching Learning Process			L2, L3, L4, L5
Module -5			

Types of caissons, Analysis of well foundations, Design principles, Well construction and sinking. Foundations for tower structures: Introduction, Forces on tower foundations, Selection of foundation type, Stability and design considerations, Ring foundations – general concepts.

Teaching Learning Process

L2, L3,L4, L5

Course outcomes: On completion of this course, students are able to:

- Co1: Achieve Knowledge of design and development of problem solving skills.
- Co2: Understand the principles of subsoil exploration
- Co3: Design and develop analytical skills.
- Co4: Identify and evaluate the soil shear strength parameters.
- Co5: Understand the concepts of Settlement analysis.

Question paper pattern:

- The question paper will have ten questions.
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

COMPOSITE MATERIALS			
[As per Choice Based Credit System (CBCS) scheme]			
SEMESTER – III			
Subject Code	22CSE322	CIE Marks	50
Number of Lecture Hours/Week	03	SEE Marks	50
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
Prerequisites: Basic knowledge on material properties, Matrix Method of Structural Analysis and Mechanics of Deformable Bodies			
Course objectives: Students will be To impart knowledge of composite materials in the context of structural engineering application. To impart a skill of analyzing macro and micro mechanical behaviour of composites. To develop introductory knowledge about manufacturing of composites and its failure theories.			
Modules			
Module-1			
Introduction: Introduction to Composite materials, classifications (thermoset and thermoplastic) and civil/structural engineering applications. Constituent materials of composites – Reinforcements and matrix. Rule of mixture. Selection of materials. Manufacturing techniques – Hand layup method and compression moulding method. Basics of fiber reinforced composite (Synthetic and natural FR Polymer composites). Advantages and Limitations of composites.			
Teaching Learning Process			L1, L2, L4
Module-2			
Macro-mechanical Behaviour of a Lamina: Introduction, Stress-Strain Relations For Anisotropic Materials. Stiffness's, compliances, and engineering constants for orthotropic materials. Restrictions on engineering constants. Numerical problems.			
Teaching Learning Process			L3, L4, L5
Module -3			
Macro-mechanical Behaviour of a Lamina contd... Stress-strain relations for plane stress in an orthotropic material. Stress-strain relations for a lamina of arbitrary orientation. Invariant properties of an orthotropic lamina. Strengths of an orthotropic lamina, thermal and mechanical stress analysis. Numerical problems.			
Teaching Learning Process			L3, L4, L5
Module -4			
Micro-mechanical behaviour of a lamina: introduction, mechanics of materials approach to stiffness. Determination of E_1 . Determination of E_2 . Determination of ν_{12} . Determination of G_{12} . Numerical problems.			
Teaching Learning Process			L3, L4, L5
Module -5			
Classical composite lamination theory, cross and angle – ply laminates, symmetric, anti-symmetric and general symmetric laminates. Mechanical coupling. Analysis of simple laminated structural elements ply-stress and strain, lamina failure theories concepts- Maximum Stress Failure Criterion, Maximum Strain Failure Criterion and Tsai-Hill Failure Criterion. Numerical Problems.			
Teaching Learning Process			L3, L4, L5

Course outcomes:

On successful completion of the course, the student will be able to:

1. Define and classify the composite materials.
2. Analyze the macro-mechanical behaviour of composites.
3. Derive the engineering constants of composites.
4. Select the appropriate constituent materials for composite manufacture.

Question paper pattern:

- The question paper will have ten questions.
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

DESIGN OF INDUSTRIAL STRUCTURES [As per Choice Based Credit System (CBCS) scheme] SEMESTER – III			
Subject Code	22CSE323	CIE Marks	50
Teaching Hours/Week (L:P:SDA)	3:0:0	SEE Marks	50
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
Prerequisites: Basic knowledge of steel structures and structural analysis of RCC structures			
Course objectives: The objective of this course is to make students to learn principles of Design of industrial building, To design different components of industrial structures and to detail the structures. To evaluate the performance of the Pre-engineered buildings			
Modules			
Module-1			
Analysis of industrial building for Gravity and Wind load. Analysis and design of framing components namely, girders, trusses, gable frames			
Teaching Learning Process			L2, L3,L4
Module-2			
Analysis and design of gantry column (stepped column / column with bracket), purlins, girts, bracings including all connections.			
Teaching Learning Process			L2, L3,L4
Module -3			
Analysis of transmission line towers for wind load and design of towers including all connections.			
Teaching Learning Process			L2, L3,L4
Module -4			
Forms of light gauge sections, Effective width computation of unstiffened, stiffened, multiple stiffened compression elements of cold formed light gauge sections. Concept of local buckling of thin elements. Limiting width to thickness ratio. Post buckling strength.			
Teaching Learning Process			L1, L2,L4
Module -5			
Concept of Pre- engineered buildings, Design of compression and tension members of cold formed light gauge sections, Design of flexural members (Laterally restrained / laterally unrestrained).			
Teaching Learning Process			L2, L3,L4
Course outcomes: On completion of this course, students are able to			
<ul style="list-style-type: none"> • Co1: Achieve Knowledge of design and development of problem solving skills. • Co2: Understand the industrial building and the components. • Co3: Design and develop analytical skills. • Co4: Summarize the principles of Structural Design and detailing • Co5: Understands the concept of Pre- engineered buildings. 			

Question paper pattern:

The question paper will have ten questions; each question carries equal marks, there will be two full questions or with a maximum of four sub questions from each module, students will have to attend five full questions from each module.

STRUCTURAL HEALTH MONITORING			
[As per Choice Based Credit System (CBCS) scheme]			
SEMESTER – III			
Subject Code	22CSE324	CIE Marks	50
Teaching Hours/Week (L:P:SDA)	3:0:0	SEE Marks	50
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
Prerequisites: Knowledge of Concrete Technology and steel structures (Construction Materials) and Basic knowledge about structural dynamics.			
Course objectives:			
<ol style="list-style-type: none"> 1. Learn the fundamentals of structural health monitoring. 2. Study the various vibration-based techniques for structural health monitoring. 3. Learn the structural health monitoring using fiber-optic and Piezoelectric sensors. 4. Study the structural health monitoring using electrical resistance and electromagnetic techniques. 			
Modules			
Module-1			
Introduction to Structural Health Monitoring Definition of structural health monitoring (SHM), Motivation for SHM, SHM as a way of making materials and structures smart, SHM and biomimetics, Process and pre-usage monitoring as a part of SHM, SHM as a part of system management, Passive and active SHM, NDE, SHM and NDECS, Variety and multidisciplinary: the most remarkable characters of SHM, Birth of the SHM Community.			
Teaching Learning Process		L2, L3	
Module-2			
Vibration-Based Techniques for SHM Basic vibration concepts for SHM, Local and global methods, Damage diagnosis as an inverse problem, Model-based damage assessment, Mathematical description of structural systems with damage, General dynamic behavior, Statespace description of mechanical systems, Modeling of damaged structural elements, Linking experimental and analytical data, Modal Assurance Criterion (MAC) for modepairing, Modal Scaling Factor (MSF), Co-ordinate Modal Assurance Criterion (COMAC), Damping, Expansion and reduction, Updating of the initial model, Damage localization and quantification, Change of the flexibility matrix, Change of the stiffness matrix, Strain-energy-based indicator methods and curvature modes, MECE error localization technique, Static displacement method, Inverse eigen sensitivity method, Modal force residual method, Kinetic and strain energy- based sensitivity methods, Forced vibrations and frequency response functions, Solution of the equation system, Regularization, Parameter subset selection, Other solution methods, Variances of the parameters, Neural network approach to SHM, The basic idea of neural networks, Neural networks in damage detection, localization and quantification, Multi-layer Perceptron (MLP), A simulation example, Description of the structure, Application of damage indicator methods, Application of the modal force residual method and inverse eigen sensitivity method, Application of the kinetic and modal strain energy methods, Application of the Multi- Layer Perceptron neural network, Time-domain damage			

detection methods for linear systems, Parity equation method, Kalman filters, AR and ARX models, Damage identification in non-linear systems, Extended Kalman filter, Localization of damage using filter banks, A simulation study on a beam with opening and closing crack, Applications, I-40 bridge, Steel quake structure, Application of the Z24 bridge, Detection of delamination in a CFRP plate with stiffeners.

Teaching Learning Process

L2, L3

Module -3

Fiber-Optic Sensors Classification of fiber-optic sensors, Intensity-based sensors, Phase modulated optical fiber sensors, or interferometers, Wavelength based sensors, or Fiber Bragg Gratings (FBG), The fiber Bragg grating as a strain and temperature sensor, Response of the FBG to uniaxial uniform strain fields, Sensitivity of the FBG to temperature, Response of the FBG to a non-uniform uniaxial strain field, Response of the FBG to transverse stresses, Photoelasticity in a plane stress state, Structures with embedded fiber Bragg gratings, Orientation of the optical fiber optic with respect to the reinforcement fibers, Ingress/egress from the laminate, Fiber Bragg gratings as damage sensors for composites, Measurement of strain and stress variations, Measurement of spectral perturbations associated with internal stress release resulting from damage spread, Examples of applications in aeronautics and civil engineering, Stiffened panels with embedded fiber Bragg gratings, Concrete beam repair.

Teaching Learning Process

L2, L3

Module -4

SHM with Piezoelectric Sensors The use of embedded sensors as acoustic emission (AE) detectors, Experimental results and conventional analysis of acoustic emission signals, Algorithms for damage localization, Algorithms for damage characterization, Available industrial AE systems, New concepts in acoustic emission, State-the-art and main trends in piezoelectric transducer-based acousto-ultrasonic SHM research, Lamb wave structure interrogation, Sensor technology, Tested structures (mainly metallic or composite parts), Acousto-ultrasonic signal and data reduction methods, The full implementation of SHM of localized damage with guided waves in composite materials, Available industrial acousto-ultrasonic systems with piezoelectric sensors, Electromechanical impedance, E/M impedance for defect detection in metallic and composite parts, The piezoelectric implant method applied to the evaluation and monitoring of viscoelastic properties.

Teaching Learning Process

L2, L3

Module -5

SHM Using Electrical Resistance Composite damage, Electrical resistance of unloaded composite, Percolation concept, Anisotropic conduction properties in continuous fiber reinforced polymer, Influence of temperature, Composite strain and damage monitoring by electrical resistance, 0° unidirectional laminates, Multidirectional laminates, Randomly distributed fiber reinforced polymers, Damage localization. Low Frequency Electromagnetic Techniques Theoretical considerations on electromagnetic theory, Maxwell's equations, Dipole radiation, Surface impedance, Diffraction by a circular aperture, Eddy currents, Polarization of dielectrics, Applications to the NDE/NDT domain, Dielectric materials, Conductive materials, Hybrid method, Signal

processing, Time-frequency transforms, The continuous wavelet transform, The discrete wavelet transform, Multiresolution, Denoising, Application to the SHM domain, General principles, Magnetic method, Electric method, Hybrid method.	
Teaching Learning Process	L3, L4

ADVANCED CONCRETE TECHNOLOGY [As per Choice Based Credit System (CBCS) scheme] SEMESTER – III			
Subject Code	22CSE331	CIE Marks	50
Teaching Hours/Week (L:P:SDA)	3:0:0	SEE Marks	50
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
Prerequisites: Knowledge of Material Science and Concrete Technology			
Course objectives: The objective of the course is to provide students to obtain an in-depth knowledge of a wide variety of advanced topics in concrete technology and practice. Concrete, being the popular materials for the construction material for civil infrastructure building, is undergoing significant changes in the recent times, in relation to the constituent materials used, production technology, testing methods and performance requirements.			
Modules			
Module-1			
Fibre reinforced concrete: History, mechanism, different types of fibres, Aspect ratio, Volume of fibres, orientation of fibres, balling effect, properties of fibre reinforced concrete, applications of fibre reinforced concrete. Types of Fibre reinforced concrete.			
Ferro cement: Definition, different materials used, casting techniques, properties of Ferro cement, applications.			
Teaching Learning Process			L1,L2 and L3
Module-2			
Light Weight Concrete: Introduction, classification, properties, strength and durability, mix proportioning and problems.			
High Density Concrete: Radiation shielding ability of concrete, materials for high density concrete, mix proportioning, properties in fresh and hardened state, placement methods.			
Teaching Learning Process			L1,L2 and L3
Module -3			
Ready mix concrete: Concept, ready mix concrete plants, difficulties faced and their solution , use of admixtures in ready mix concrete, economics and quality control aspects of ready mix concrete.			
High Performance Concrete: Constituents, mix proportioning, properties in fresh and hardened states, applications & limitations.			
Teaching Learning Process			L1,L2 and L3
Module -4			
Polymer concrete: Polymers, resins, polymerization, different types of polymer concrete like polymer impregnated concrete, polymer concrete (Resin concrete) and polymer modified concrete, their properties and applications.			

Self-compacting concrete:

Development of SCC, basic principles and requirements, workability tests for SCC, mix design of SCC, acceptance criteria for SCC, adoption of SCC in the precast industry, present status of SCC

Teaching Learning Process	L1,L2 and L3
Module -5	
Concrete from Industrial wastes:	
a. Blast furnace slag cement concrete b. Fly-ash concrete c. Silica fume concrete d. Recycled aggregate Concrete	
Teaching Learning Process	L1,L2 and L3
Course outcomes:	
a. Co1: On complete of this course the students will able to understand the construction material, meeting the demanding performance requirements based on men, machines and materials. b. Co2: Innovative special concrete with mixes, applications and limitations c. Co3: Testing methods developed to increase the scope of concrete usage as an advanced material	
Question paper pattern:	
The question paper will have ten questions; each question carries equal marks, there will be two full questions or with a maximum of four sub questions from each module, students will have to attend five full questions from each module.

Fracture Mechanics in Structural Engineering [As per Choice Based Credit System (CBCS) scheme] SEMESTER - III			
Subject Code	22CSE332	CIE Marks	50
Teaching Hours/Week (L:P:SDA)	3:0:0	SEE Marks	50
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS - 03			
Prerequisites: Concrete Technology and Mechanics of Deformable Bodies			
Course objectives: 1. To compute the stress intensity factor, strain energy release rate and the stress and strain fields around a crack tip for linear and nonlinear materials. 2. Know experimental methods to determine the fracture toughness. 3. Use the design principles of materials and structures using fracture mechanics approach.			
Modules			
Module-1			
Stress concentration in elastic materials			
Theory of stress concentration in elastic materials, stress concentration factors around circular and elliptic holes. Influence of ratio of radii on stress concentration factor in elliptic hole.			
Teaching Learning Process			L1, L2
Module-2			
Linear Elastic Fracture mechanics			
Modelling a crack as a flat elliptic hole by Inglis and the limitations of the model, Griffith theory of brittle fracture Theories of linear elastic fracture mechanics, stress intensity factors, Irwin's definition. Fracture toughness K_{Ic} , K_{IIc} , K_{IIIc} & corresponding values of G_C .			
Teaching Learning Process			L2,L3
Module-3			
Elasto-plastic fracture mechanics			
Crack-tip plasticity in metals. Irwin's modification for elasto-plastic material. J integral, CMOD, CTOD. Mixed mode problems and evaluation of critical fracture parameters.			
Teaching Learning Process			L2,L3,L4
Module-4			
Fracture of Concrete			
Limitations of theories of linear elastic fracture mechanics in concrete, Review of concrete behaviour in tension and compression. Kaplan's experiments, concept of fracture energy, definition of a quasi-brittle material, concept of softening.			
Teaching Learning Process			L2,L3,L4
Module-5			
Advanced concepts in fracture behavior of concrete			
Definition of fracture energy by RILEM, Influence of size on fracture behavior, Bazant's size effect law. Size dependent & independent fracture energies. Application of fracture mechanics in design of concrete structures.			
Teaching Learning Process			L2,L3,L4
Course Outcomes: After studying this course, students will be able to:			

- Apply principles of fracture mechanics.
- Design concrete structures using fracture mechanics approach.
- Explain the importance of fracture mechanics.
- Take special care of very large sized structures.

Question paper pattern: The question paper will have ten questions; each question carries equal marks, there will be two full questions or with a maximum of four sub questions from each module, students will have to attend five full questions from each module.

Retrofitting and Rehabilitation of Structures			
[As per Choice Based Credit System (CBCS) scheme]			
SEMESTER – III			
Subject Code	22CSE333	CIE Marks	50
Teaching Hours/Week (L:P:SDA)	3:0:0	SEE Marks	50
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
Prerequisites: basic knowledge of Concrete technology and construction Technology			
Course objectives:			
<ol style="list-style-type: none"> 1. Learn the fundamentals of maintenance and repair strategies. 2. Study the quality assurance, serviceability and durability of concrete. 3. Know the various materials and techniques used for repair of structures. 4. Educate the different repair, strengthening, rehabilitation and retrofitting techniques. 5. Instruct the various health monitoring and demolition techniques. 			
Modules			
Module-1			
Maintenance: Repair and Rehabilitation, Facets of Maintenance, importance of Maintenance various aspects of Inspection, Assessment procedure for evaluating damaged structure, causes of deterioration.			
Repair Strategies: Causes of distress in concrete structures, Construction and design failures, Condition assessment and distress-diagnostic techniques, Assessment procedure for Inspection and evaluating a damaged structure,			
Teaching Learning Process			L2,L3
Module-2			
Serviceability and Durability of Concrete: Quality assurance for concrete construction, concrete properties – strength, permeability, thermal properties and cracking. – Effects due to climate, temperature, chemicals, corrosion – design and construction errors – Effects of cover thickness and cracking.			
Teaching Learning Process			L2,L3
Module -3			
Materials and Techniques for Repair: Special concretes and mortar, concrete chemicals, special elements for accelerated strength gain, Expansive cement, polymer concrete, Sulphur infiltrated concrete, ferro cement, Fibre reinforced concrete. Bacterial concrete, Rust eliminators and polymers coating for rebars during repair, foamed concrete, mortar and dry pack, vacuum concrete, Guniting and Shotcrete, Epoxy injection, Mortar repair for cracks, shoring and underpinning. Methods of corrosion protection, corrosion inhibitors, corrosion resistant steels, coating and cathodic protection			
Teaching Learning Process			L2,L3
Module -4			
Repair, Rehabilitation and Retrofitting Techniques: Repairs to overcome low member strength, Deflection, Cracking, Chemical disruption, weathering corrosion, wear, fire, leakage and marine exposure, Repair of Structure – Common Types of Repairs – Repair in Concrete Structures – Repairs in Under Water Structures – Guniting – Shot Create – Underpinning. Strengthening of Structures – Strengthening Methods – Retrofitting – Jacketing.			
Teaching Learning Process			L2,L3

Module -5

Health Monitoring and Demolition Techniques: Long term health monitoring techniques, Engineered demolition techniques for dilapidated structures, Use of Sensors – Building Instrumentation.

Teaching Learning Process	L3,L4
<p>Course outcomes: On completion of this course, students are able to:</p> <ul style="list-style-type: none"> • Co1: Achieve Knowledge of design and development of problem solving skills. • Co2: Understand the cause of deterioration of concrete structures. • Co3: Design and develop analytical skills. • Co4: Summarize the principles of repair and rehabilitation of structures • Co5: Understands the concept of Serviceability and Durability. 	
<p>Question paper pattern:</p> <ul style="list-style-type: none"> • The question paper will have ten questions. • There will be 2 full questions (with a maximum of four sub questions) from each module. • Each full question will have sub questions covering all the topics under a module. • The students will have to answer 5 full questions, selecting one full question from each module.

Skill Development Activities Suggested

- Conduction of technical seminars on recent research activities
- Group Discussion

GREEN BUILDING TECHNOLOGY			
[As per Choice Based Credit System (CBCS) scheme]			
SEMESTER – III			
Subject Code	22CSE334	CIE Marks	50
Number of Lecture Hours/Week	03	SEE Marks	50
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
Prerequisites: Concrete Technology and Basics of Ecology and Environment			
Course objectives:			
<ol style="list-style-type: none"> 1. Exposure to the green building technologies and their significance. 2. Understand the judicious use of energy and its management. 3. Educate about the Sun-earth relationship and its effect on climate. 4. Enhance awareness of end-use energy requirements in the society. 5. Develop suitable technologies for energy management. 			
Modules			
Module-1			
Overview of the significance of energy use and energy processes in building - Indoor activities and environmental control - Internal and external factors on energy use and the attributes of the factors - Characteristics of energy use and its management - Macro aspect of energy use in dwellings and its implications.			
Teaching Learning Process			L2,L3
Module-2			
Indoor environmental requirement and management - Thermal comfort - Ventilation and air quality – Air-conditioning requirement - Visual perception – Illumination requirement - Auditory requirement.			
Teaching Learning Process			L2,L3
Module -3			
Climate, solar radiation and their influences - Sun-earth relationship and the energy balance on the earth's surface - Climate, wind, solar radiation, and temperature – Sun shading and solar radiation on surfaces - Energy impact on the shape and orientation of buildings.			
Teaching Learning Process			L3,L4
Module -4			
End-use, energy utilization and requirements - Lighting and day lighting - End-use energy requirements - Status of energy use in buildings Estimation of energy use in a building. Heat gain and thermal performance of building envelope - Steady and non steady heat transfer through the glazed window and the wall - Standards for thermal performance of building envelope - Evaluation of the overall thermal transfer.			
Teaching Learning Process			L3,L4
Module -5			
Energy management options - Energy audit and energy targeting - Technological options for energy management.			
Teaching Learning Process			L3,L4

Course outcomes: On completion of this course, students are able to:

- **CO1:** Select appropriate green building material and technique.
- **CO2:** Design sustainable and energy efficient civil engineering project.

Question paper pattern:

- The question paper will have ten questions.
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

PROJECT WORK PHASE – 1			
Course Code	22CSE34	CIE Marks	100
Teaching Hours/Week (L:P:SDA)	0:6:0	SEE Marks	--
Credits	03	Exam Hours	--
<p>Course objectives:</p> <ul style="list-style-type: none"> • Support independent learning. • Guide to select and utilize adequate information from varied resources maintaining ethics. • Guide to organize the work in the appropriate manner and present information (acknowledging the sources) clearly. • Develop interactive, communication, organisation, time management, and presentation skills. • Impart flexibility and adaptability. • Inspire independent and team working. • Expand intellectual capacity, credibility, judgement, intuition. • Adhere to punctuality, setting and meeting deadlines. • Instil responsibilities to oneself and others. • Train students to present the topic of project work in a seminar without any fear, face audience confidently, enhance communication skill, involve in group discussion to present and exchange ideas. 			
<p>Project Phase-1 Students in consultation with the guide/s shall carry out literature survey/ visit industries to finalize the topic of the Project. Subsequently, the students shall collect the material required for the selected project, prepare synopsis and narrate the methodology to carry out the project work.</p> <p>Seminar: Each student, under the guidance of a Faculty, is required to</p> <ul style="list-style-type: none"> • Present the seminar on the selected project orally and/or through power point slides. • Answer the queries and involve in debate/discussion. • Submit two copies of the typed report with a list of references. • The participants shall take part in discussion to foster friendly and stimulating environment in which the students are motivated to reach high standards and become self-confident. 			
<p>Course outcomes: At the end of the course the student will be able to:</p> <ul style="list-style-type: none"> • Demonstrate a sound technical knowledge of their selected project topic. • Undertake problem identification, formulation, and solution. • Design engineering solutions to complex problems utilising a systems approach. • Communicate with engineers and the community at large in written an oral forms. • Demonstrate the knowledge, skills and attitudes of a professional engineer 			
<p>Continuous Internal Evaluation</p> <p>CIE marks for the project report (50 marks), seminar (30 marks) and question and answer (20 marks) shall be awarded (based on the quality of report and presentation skill, participation in the question and answer session by the student) by the committee constituted for the purpose by the Head of the Department. The committee shall consist of three faculty from the department with the senior most acting as the Chairperson.</p>			

INTERNSHIP			
Course Code	22CSEI36	CIE Marks	50
Teaching Hours/Week (L:P:SDA)	0:6:0	SEE Marks	50
Credits	06	Exam Hours	03
<p>Course objectives: Internship/Professional practice provide students the opportunity of hands-on experience that include personal training, time and stress management, interactive skills, presentations, budgeting, marketing, liability and risk management, paperwork, equipment ordering, maintenance, responding to emergencies etc. The objective are further, To put theory into practice. To expand thinking and broaden the knowledge and skills acquired through course work in the field. To relate to, interact with, and learn from current professionals in the field. To gain a greater understanding of the duties and responsibilities of a professional. To understand and adhere to professional standards in the field. To gain insight to professional communication including meetings, memos, reading, writing, public speaking, research, client interaction, input of ideas, and confidentiality. To identify personal strengths and weaknesses. To develop the initiative and motivation to be a self-starter and work independently</p>			
<p>Internship/Professional practice: Students under the guidance of internal guide/s and external guide shall take part in all the activities regularly to acquire as much knowledge as possible without causing any inconvenience at the place of internship. Seminar: Each student, is required to</p> <ul style="list-style-type: none"> • Present the seminar on the internship orally and/or through power point slides. • Answer the queries and involve in debate/discussion. • Submit the report duly certified by the external guide. • The participants shall take part in discussion to foster friendly and stimulating environment in which the students are motivated to reach high standards and become self-confident. 			
<p>Course outcomes: At the end of the course the student will be able to:</p> <ul style="list-style-type: none"> • Gain practical experience within industry in which the internship is done. • Acquire knowledge of the industry in which the internship is done. • Apply knowledge and skills learned to classroom work. • Develop a greater understanding about career options while more clearly defining personal career goals. • Experience the activities and functions of professionals. • Develop and refine oral and written communication skills. • Identify areas for future knowledge and skill development. • Expand intellectual capacity, credibility, judgment, intuition. <p>Acquire the knowledge of administration, marketing, finance and economics.</p>			
<p>Continuous Internal Evaluation CIE marks for the Internship/Professional practice report (20 marks), seminar (10 marks) and question and answer session (10 marks) shall be awarded (based on the quality of report and presentation skill, participation in the question and answer session by the student) by the committee constituted for the purpose by the Head of the Department. The committee shall consist of three faculty from the department with the senior most acting as the Chairperson.</p>			
<p>Semester End Examination SEE marks for the internship report (30 marks), seminar (20 marks) and question and answer session (10 marks) shall be awarded (based on the quality of report and presentation skill, participation in the question and answer session) by the examiners appointed by the University.</p>			

PROJECT WORK PHASE – 2			
Course Code	22CSE41	CIE Marks	100
Teaching Hours/Week (L:P:SDA)	0:8:0	SEE Marks	100
Credits	18	Exam Hours	03
<p>Course objectives:</p> <ul style="list-style-type: none"> • To support independent learning. • To guide to select and utilize adequate information from varied resources maintaining ethics. • To guide to organize the work in the appropriate manner and present information (acknowledging the sources) clearly. • To develop interactive, communication, organisation, time management, and presentation skills. • To impart flexibility and adaptability. • To inspire independent and team working. • To expand intellectual capacity, credibility, judgement, intuition. • To adhere to punctuality, setting and meeting deadlines. • To instil responsibilities to oneself and others. • To train students to present the topic of project work in a seminar without any fear, face audience confidently, enhance communication skill, involve in group discussion to present and exchange ideas 			
<p>Project Work Phase - II: Each student of the project batch shall involve in carrying out the project work jointly in constant consultation with internal guide, co-guide, and external guide and prepare the project report as per the norms avoiding plagiarism</p>			
<p>Course outcomes:</p> <p>At the end of the course the student will be able to:</p> <ul style="list-style-type: none"> • Present the project and be able to defend it. • Make links across different areas of knowledge and to generate, develop and evaluate ideas and information so as to apply these skills to the project task. • Habituated to critical thinking and use problem solving skills • Communicate effectively and to present ideas clearly and coherently in both the written and oral forms. • Work in a team to achieve common goal. • Learn on their own, reflect on their learning and take appropriate actions to improve it 			
<p>Continuous Internal Evaluation:</p> <p>Project Report: 20 marks. The basis for awarding the marks shall be the involvement of the student in the project and in the preparation of project report. To be awarded by the internal guide in consultation with external guide if any.</p> <p>Project Presentation: 10 marks. The Project Presentation marks of the Project Work Phase -II shall be awarded by the committee constituted for the purpose by the Head of the Department. The committee shall consist of three faculty from the department with the senior most acting as the Chairperson.</p> <p>Question and Answer: 10 marks. The student shall be evaluated based on the ability in the Question and Answer session for 10 marks.</p> <p>Semester End Examination SEE marks for the project report (30 marks), seminar (20 marks) and question and answer session (10 marks) shall be awarded (based on the quality of report and presentation skill, participation in the question and answer session) by the examiners appointed by the University.</p>
